

SELDÉN REVERSIBLE WINCHES

Reversing is a big step forward

With the new patented winches from Seldén you can let the line out by reversing the winch drum. The purpose made winch handle has a button which is pushed down with your thumb to prepare the winch for reverse drive. The winch handle is rotated clock wise and the line is eased out. The line remains in the self-tailing jaws all the time which means it's a one hand operation to trim the sheet, the halyard or the spinnaker guy.

Instant trim makes for higher boat speed. For the family cruising sailor, one handed operation means safety – no hands are even close to the drum when easing out the line. In rough conditions you can hold on with your free hand. Single handed sailors can steer and trim at the same time. When not in reverse mode, the Seldén Reversible winch operates like any other two-speed manual winch.

The Seldén reversible winches are available in sizes R30, R40, R46 and R52.

- Unique and patented reverse function operated with a push of your thumb.
- Stainless drum with 10 flat faces makes for excellent grip and is kind to the line. It looks good too.
- Low weight. The centre tower is partly composite.
- Compatible with all winch handles on the market, but only the Seldén winch handle offers 2-speed forward and 1-speed reverse.
- 10" Seldén winch handle with lock-in switch.
- Smooth and well rounded reverse feeder. The sheet can be dumped fast when tacking.

Unique and patented reverse function operated with a push of your thumb.
